Hello!

My name is Malu Dietrich. For nine years, I successfully managed my own business in the beauty industry, excelling in customer service and business management. However, my passion for technology led me to embark on a new path.

A year ago, I started studying software programming and recently completed my course as a Web Developer. I am eager to apply my technical skills and business experience in the technology field.

I am currently seeking an opportunity in the tech sector that will allow me to continue growing professionally and contribute value with my new skills.

## Education

### Web development Ironhack

The course provided me with a solid foundation in web development, focusing on creating structured and responsive web pages, as well as introducing version control for efficient code management. I learned how to build dynamic applications using object-oriented programming and advanced concepts for handling data, such as arrays, objects, and asynchronous functions.

The course also covered frontend and backend integration, enabling me to develop full-stack applications. It included the creation of servers for data management and the integration of APIs for frontend-backend communication, with a focus on data persistence and efficient modeling.

### Responsive Web Design

-FreeCodeCamp - 2023

### JavaScript Algorithms and Data Structures

FreeCodeCamp - 2023

## Skills

Adaptability and Quick Learning

Perseverance in Problem Solving

Organization and Perfectionism

Web Development: JavaScript |ReactJS |Bootstrap |Html |CSS |Cloudinary |Leaflet |Node.js |Express.js |MERN |SPA| MongoDB |Mongoose |JWT | GIT |Responsive Design |APIs |Deploy Applications

## Projects

### InmoLux Project

The client interface was built with JavaScript and React for an intuitive user experience. This project uses Leaflet for interactive maps and Cloudinary for image management. The application follows the MERN stack, with Node.js and Express.js powering the backend API and MongoDB as the database, ensuring efficient communication between server and client.

### ClickArte Project

The user interface is built with React for interactivity and Bootstrap for responsive layouts, while the backend is powered by Node.js. The application supports full CRUD functionality for image management and integrates React Context API for efficient state management across components.

## Professional Experience

### **Jun 2023/Jul 2024**

SURREAL Beauty and Bar /Seville

### **Aug 2014/Jun 2023**

DIETRICH beauty center /Porto Portugal
